

■ PIN CONFIGURATIONS

■ BLOCK DIAGRAM

Note: R2, R3, C2 and C3 are parts externally mounted

■ ABSOLUTE MAXIMUM RATINGS ($T_A=25^\circ\text{C}$, unless otherwise specified)

PARAMETER	SYMBOL	RATINGS	UNIT
Supply Voltage	V_{CC}	30	V
Power Dissipation	DIP-8	P_D	800
	SOP-8	P_D	400
Operating Temperature	T_{OPR}	-45 ~ +85	$^\circ\text{C}$
Storage Temperature	T_{STG}	-65 ~ +150	$^\circ\text{C}$

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged.

Absolute maximum ratings are stress ratings only and functional device operation is not implied.

■ ELECTRICAL CHARACTERISTICS

($T_A=25^\circ\text{C}$, all voltage referenced to GND unless otherwise specified)

PARAMETER	SYMBOL	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Operating Supply Voltage	V_{CC}				29.0	V
Initiation Supply Voltage (Note 1)	V_{SI}	See Fig.2	17	19	21	V
Initiation Supply Current (Note 1)		6.8K-Pin 2 to GND	1.3	2.8	4.2	mA
Sustaining Voltage (Note 2)	V_{SUS}	See Fig.2	9.7	11.0	12.0	V
Sustaining Current (Note 2)	I_{SUS}	No Load $V_{CC}=V_{SUS}$, See Fig.2	0.7	1.4	2.5	mA
Output Voltage High	V_{OH}	$V_{CC}=21\text{V}$, $I_8=-15\text{mA}$ Pin6=6V, Pin7=GND	17.0	19.0	21.0	V
Output Voltage Low	V_{OL}	$V_{CC}=21\text{V}$, $I_8=15\text{mA}$ Pin6=GND, Pin7=6V			1.6	V
IIN(Pin 3)		Pin3=6V, Pin4=GND			500	nA
IIN(Pin 7)		Pin7=6V, Pin6=GND			500	nA
High Frequency 1	FH1	R3=191K, C3=6800pF	461	512	563	Hz
High Frequency 2	FH2	R3=191K, C3=6800pF	576	640	704	Hz
Low Frequency	FL	R2=165K, C2=0.47 μF	9.0	10	11.0	Hz

Notes: (See electrical characteristics sheet)

1. Initiation supply voltage (V_{SI}) is the supply voltage required to start the tone ringer oscillating.
2. Sustaining voltage (V_{SUS}) is the supply voltage required to maintain oscillation.

■ APPLICATION NOTE

The application circuit illustrates the use of the UTC **31002A** device in typical telephone tone ringer application.

The AC ringer signal voltage appears across the TIP and RING inputs of the circuit and is attenuated by capacitor C1 and resistor R1.

C1 also provides isolation from DC voltage (48V) on the exchanged line.

After full wave rectification by the bridge diode, the wave form is filtered by capacitor C4 to provide a DC supply for the tone ringer chip.

As this voltage exceeds the initiation voltage (V_{si}), oscillation starts.

With the components shown, the output frequency chops between 512Hz (F_{H1}) and 640 Hz (F_{H2}) at a 10 Hz (F_L) rate.

The loudspeaker load is coupled through a 1300Ω to 8Ω transformer.

The output coupling capacitor C5 is required with transformer coupled loads.

When driving a piezo-ceramic transducer type load, the coupling C5 and transformer (1300Ω:8Ω) are not required.

However, a current limiting resistor is required.

The low frequency oscillator oscillates at a rate (F_L) controlled by an external resistor (R2) and capacitor (C2).

The frequency can be determined using the relation $F_L=1/1.289 R_2 \cdot C_2$. The high frequency oscillates at a F_{H1} , F_{H2} controlled by an external resistor (R3) and capacitor (C3). The frequency can be determined using the relation $F_{H1}=1/1.504 R_3 \cdot C_3$ and $F_{H2}=1/1.203 R_3 \cdot C_3$

Pin 2 of the UTC **31002A** allows connection of external resistor RSL, which is used to program the slope of the supply current vs. supply voltage characteristics (see Fig.3), and hence the supply current up to the initiation voltage (V_{si}). This initiation voltage remains constant independent of RSL.

The supply current drawn prior to triggering varies inversely with RSL, decreasing for increasing value of resistance. Thus, increasing the value of RSL, will decrease the amount of AC ringing current required to trigger the device. As such, longer subscriber loops are possible since less voltage is dropped per unit length of loop wire due to the lower current level. RSL can also be used to compensate for smaller AC coupling capacitors (C5 on Fig.4) (higher impedance) to the line which can be used to alter the ringer equivalence number of a tone ringer circuit.

The graph in Fig.3 illustrates the variation of supply current with supply voltage of the UTC **31002A**.

Three curves are drawn to show the variation of initiation current with RSL. Curve B ($R_{SL}=6.8K$) shows the I-V characteristic for UTC **31002A** tone ringer. Curve A is a plot with $R_{SL}<6.8K$ and shows an increase in the current drawn up to the initiation voltage V_{si} . The I-V characteristic after initiation remains unchanged. Curve C illustrates the effect of increasing RSL above 6.8K initiation current decreases but again current after triggering is unchanged.
