

**LV2462/2463**

Preliminary

**LINEAR INTEGRATED CIRCUIT**

**FAMILY OF LOW-POWER  
RAIL-TO-RAIL INPUT/OUTPUT  
OPERATIONAL AMPLIFIERS  
WITH SHUTDOWN**

■ DESCRIPTION

The UTC **LV2462/LV2463** are dual low-power rail-to-rail input/output op amplifiers with low supply current (500uA/op) and low voltage (2.7-6V), that can be designed into a wide range of applications. The UTC **LV2463** offers a shutdown terminal, which places the amplifier in an ultralow supply current mode ( $I_{CC}=0.3\mu A/ch$ ).

The UTC **LV2462/LV2463** have a guaranteed 1.6 V/ $\mu s$  slew rate and low supply current. rail-to-rail output and high output current make the IC's ideal for buffering analog-to-digital converters. And the input common-mode voltage range including ground and  $V_{CC}$ . Besides, they are also able to driving large capacitive loads.

Good AC performance can be provided because of 6.4MHz of bandwidth and 1.6 V/ $\mu s$  of slew rate. Furthermore, low input noise voltage ( $11nV/\sqrt{Hz}$ ) and low input offset voltage (100 $\mu V$ ) make good DC performance.
