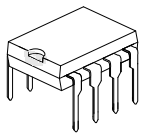
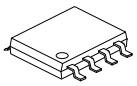
EARTH LEAKAGE CURRENT DETECTOR



DIP-8



SOP-8

■ DESCRIPTION

The UTC **M54223** is a semiconductor integrated circuit with amplifier for a high-speed earth leakage circuit breaker.

For the amplifying parts of earth leakage circuit breaker, the UTC **M54223** consists of differential amplifier, latch circuit and voltage regulator.

In normal operating, the UTC **M54223** should be connected to the secondary side of the ZCT (zero current transformers). Here the ZCT detects leakage current different amplifiers' both input.

Then the signals which have been amplified are integrated by an external capacitor. The integrated signal connects to the input terminal whose output is suitable for the characteristics of high-speed earth leakage circuit breaker.

UTC **M54223** have not the latch circuit.When the leakage signal is released, the circuit is automatically reset.

■ FEATURES

* With good input sensitivity current temperature characteristics
* High input sensitivity :V_T=6.1mV (Typ.)
* Only need low external component count
* High noise and surge-proof
* Low power dissipation :P_D=5mW (Typ.)
* May be used both as 100V and 200V.
* Wide temperature range : from -20 °C to +80°C

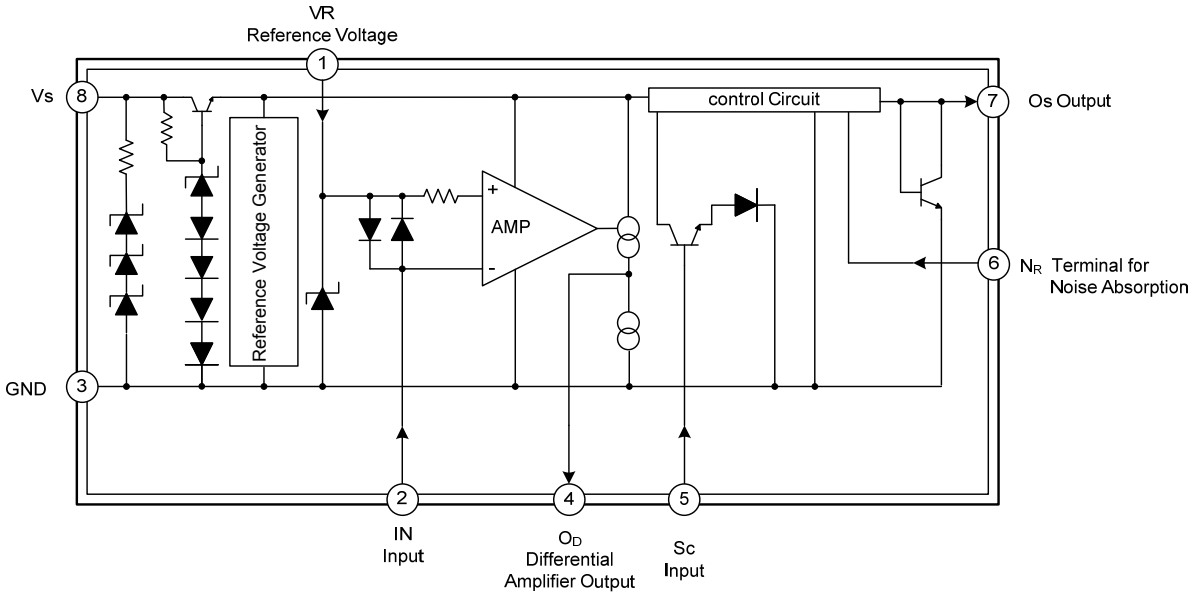
■ PIN DESCRIPTION

PIN NO.	PIN NAME	DESCRIPTION
1	V_R	Reference voltage terminal
2	IN	Input terminal
3	GND	Ground
4	O_D	Differential amplifier output terminal
5	S_C	input terminal
6	N_R	Terminal for noise absorption
7	O_S	Output terminal
8	V_S	Supply voltage terminal

■ BLOCK DIAGRAM



■ ABSOLUTE MAXIMUM RATING (unless otherwise specified)

PARAMETER		SYMBOL	RATINGS	UNIT
Supply Current		I_S	8	mA
V_R Pin Current	Between V_R-IN (Note 2)	I_{VR}	250	mA
	Between V_R-GND		30	mA
	Between IN-V_R(Note 2)		-250	mA
IN Terminal Current	Between IN-V_R(Note 2)	I_{IN}	250	mA
	Between IN-GND		30	mA
	Between V_R-IN (Note 2)		-250	mA
S_C Terminal Current		I_{SC}	5	mA
Power Dissipation	DIP-8	P_D	350	mW
	SOP-8		200	mW
Operating Temperature		T_{OPR}	-20 ~ +80	°C
Storage Temperature		T_{STG}	-55 ~ +125	°C

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged. Absolute maximum ratings are stress ratings only and functional device operation is not implied.
2. Current value between V_R and IN, and between IN and V_R is less than 1ms in the pulse width, and duty cycle is less than 12%, In applying AC current continuously, it is 100 mA in the off-state.

■ RECOMMENDED OPERATING CONDITIONS (unless otherwise specified)

PARAMETER	SYMBOL	MIN	TYP	MAX	UNIT
Supply Voltage When Latch Circuit Is Off-State	V_S	12			V
External Capacitor Between Vs and GND	C_{VS}	1			μF
External Capacitor Between Os and GND	C_{OS}			1	μF

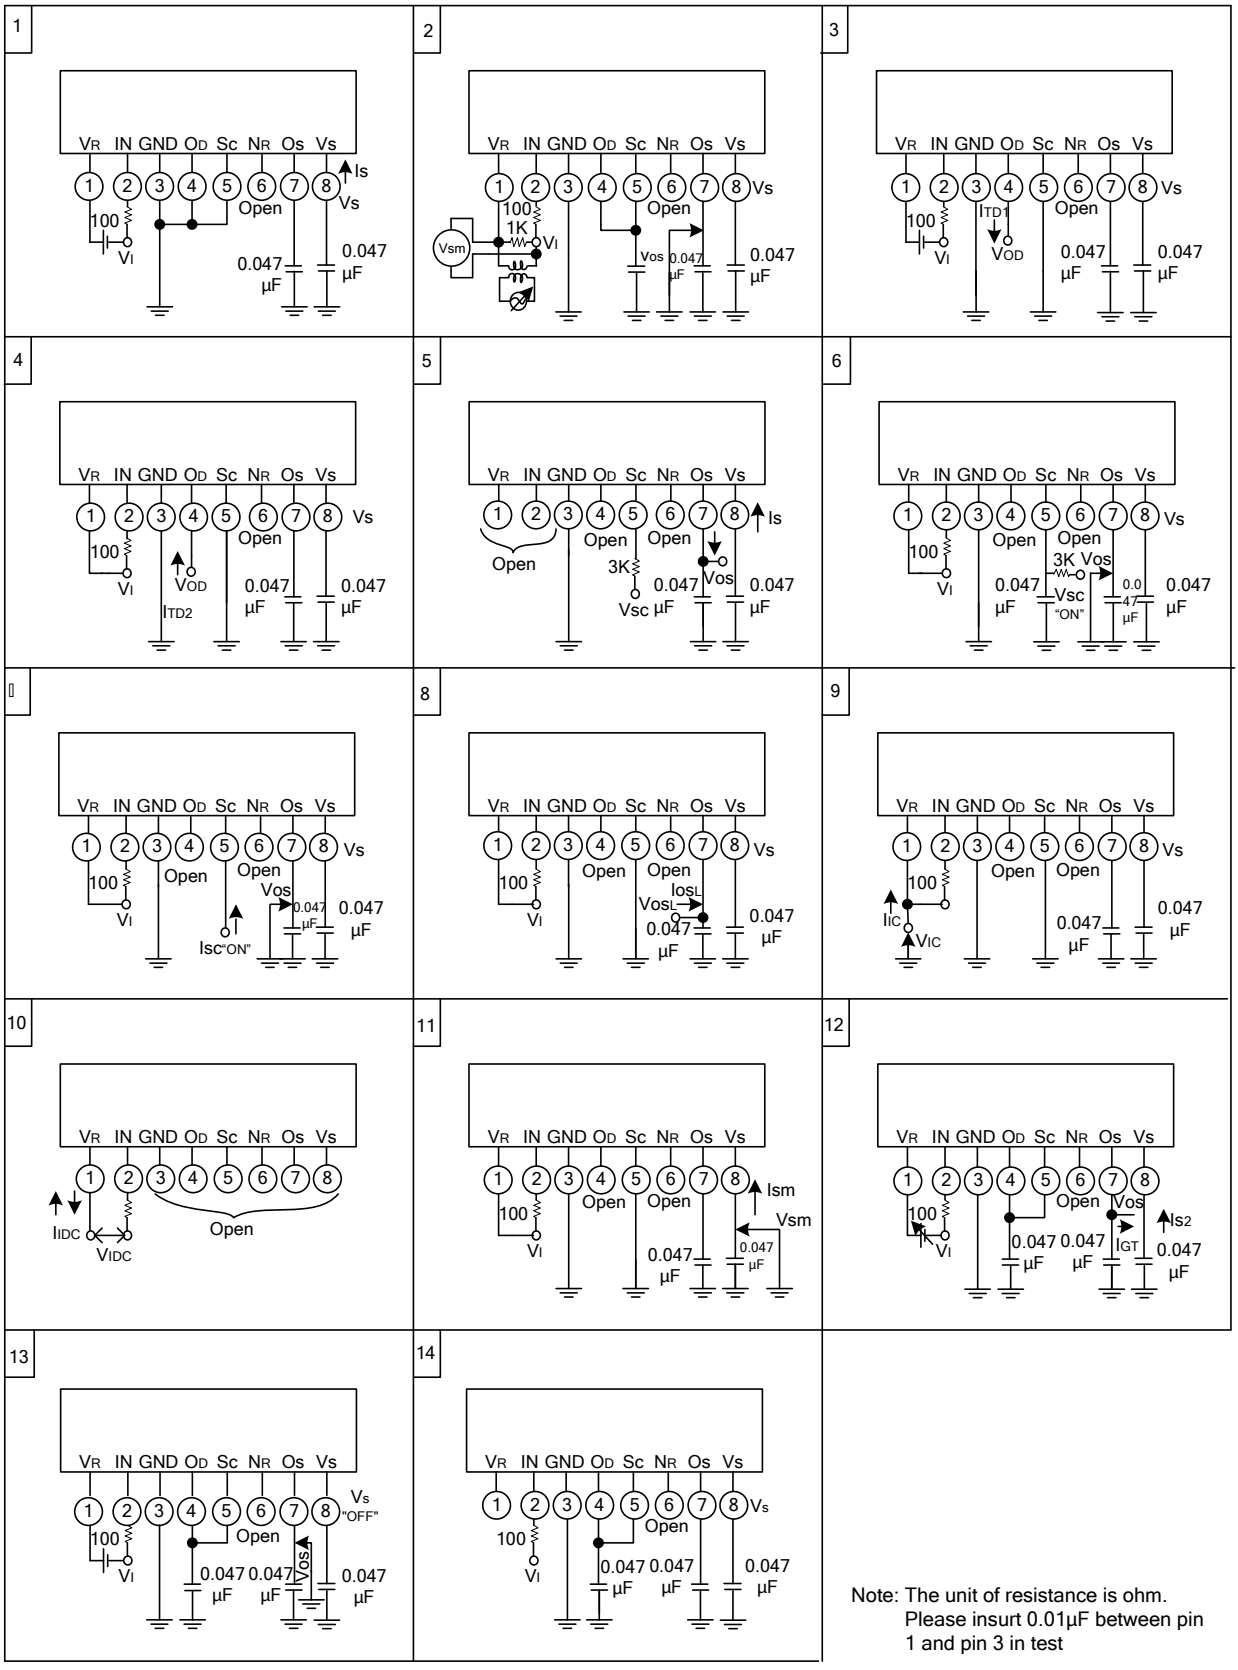
■ ELECTRICAL CHARACTERISTICS (Cont.)

Notes: 1. When standard value of voltage (60Hz) between V_R and V_I is minimum, and output O_S is low-level, or when standard value of voltage (60Hz) between V_R and V_I is maximum, and output O_S is high-level, it is considered as a good one.
2. When standard value of voltage $V_{SC(ON)}$ is minimum, and output O_S is low-level, or when standard value of voltage $V_{SC(ON)}$ is maximum, and output O_S is high-level, it is considered as a good one.
3. Supply current 2 is necessary to keep high in output O_S.
4. After applying 30mV between V_R and V_I and shorting between them, it is considered as a good one if standard value of IGT flows out of output O_S.
5. After supply voltage applies 12V and output O_S is high-level, it is considered as a good one in the standard value of supply voltage and in the low-level of output O_S.
6. Operating time is a time from applying fixed input till operating latch circuit in 0.047μF between O_D and GND.

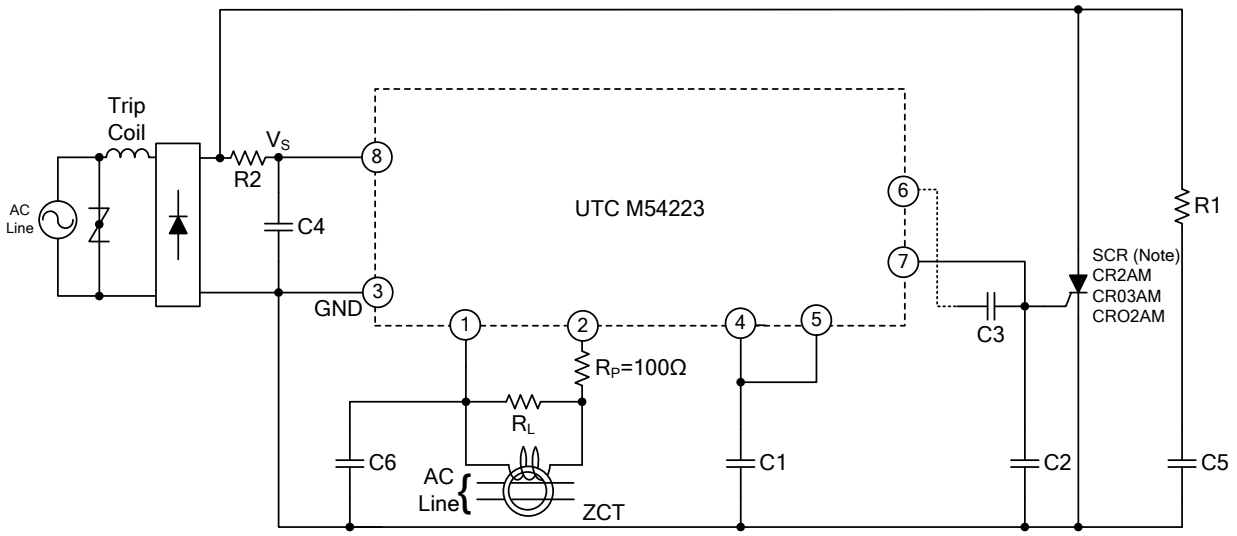
■ TEST CIRCUITS



Note: The unit of resistance is ohm.
Please insurt 0.01μF between pin 1 and pin 3 in test

■ TYPICAL APPLICATION CIRCUIT

High-Speed Leakage Circuit Breaker With UTC M54223



Note: Gate current must be selected.
Please select voltage resistance by AC supply voltage

Note: The value of R1, R2, C4, and C5 should be chosen in order to keep at least 12V in Vs.
Please connect C4 (>1μF) and C2 (<1μF).
ZCT and load resistance R_L of ZCT are connected between input pin 1 and 2.
Protective resistance (R_P=100Ω) must be insurted.
R_L and amplifier's output (in Pin 4) regulates sensitivity current
External capacitor C1 between pin 4 and GND is used for noise removal.
Please connect a varistor or a diode (2 pcs.) to ZCT in parallel, because of when large current is grounded in the primary side (AC line) of ZCT, the following situation can be abandoned: The wave form in the secondary side of ZCT is distorted and some signals do not appear in the output of amplifier.
Please connect capacitor (about 0.047μF) between pin 6 and pin 7.
Capacitor C6 between pin 1 and GND is about 0.047μF for removing noise.
