Preliminary

**BIPOLAR IC**

### HIGH OUTPUT CURRENT LOW NOISE, LOW POWER OPERATIONAL AMPLIFIERS

#### DESCRIPTION

The UTC **MC33178** is a Bipolar dual operational amplifier with high performance concepts. Its all NPN output stage exhibits no deadband crossover distortion, large output voltage swing, and an excellent phase and gain margin. It also provides a low open loop high frequency output impedance with symmetrical source and sink AC frequency performance. This device use of high frequency PNP input transistors to produce amplifiers exhibiting low input offset voltage, noise and distortion.

Notes: 1. Absolute maximum ratings are those values beyond which the device could be permanently damaged.

Absolute maximum ratings are stress ratings only and functional device operation is not implied.

2. Either or both input voltages must not exceed the magnitude of  $V_{CC}$  or  $V_{EE}$ .

3. Power dissipation must be considered to ensure maximum junction temperature ( $T_J$ ) is not exceeded.
