LINEAR INTEGRATED CIRCUIT

PROTECTOR IC FOR STEREO POWER AMPLIFIER

DESCRIPTION

UTC **UPC1237** is a semiconductor integrated circuit designed for protecting stereo power amplifiers and loudspeakers.

FEATURES

- * Wide supply voltage range of 25V~60V
- * Contain a relay driver. (Max. $I_b=80mA$)
- * Work as either latching function or automatic resetting function by using pin 3. (In both overload detection and output offset detection, either function can be selected.)
- * Single power supply
- * Built-in output offset detection function. Both positive and negative output offset can be detected through pin2
- * AC voltage can be detected
- * Time delay function. The time delay from amplifier power ON to relay ON can be freely set by selecting external components
- * The moment that amplifier-power is turned off, it can make relay broken OFF and then loudspeaker disconnected for amplifier to prevent a shock off noise
