

POWER DISTRIBUTION SWITCH

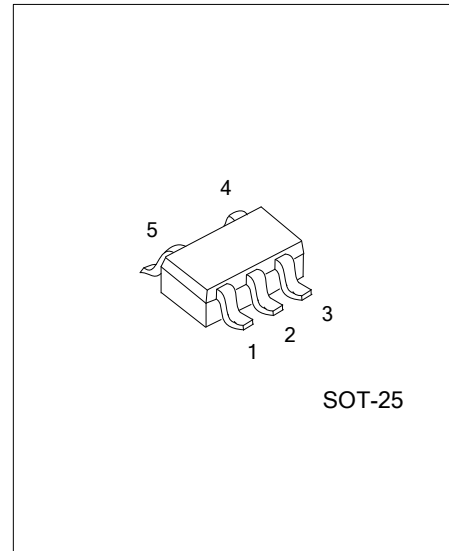

DESCRIPTION

The UTC **US206** is a power distribution switch. It particularly designed for self-powered and bus-powered Universal Serial Bus (USB) applications.

The $R_{DS(ON)}$ of the MOSFET switch is as low as $85m\Omega$. \overline{OC} is open-drain output report over-current or over-temperature event which has deglitch typical 9ms timeout period typically 9ms.

The UTC **US206** incorporates protection circuits including current limiting circuit with foldback function, thermal shutdown circuit designed to prevent catastrophic switch failure due to increasing power dissipation when continuous heavy loads or short circuit occurs. Besides, a built-in charge pump is used to drive the N-channel MOSFET that is free of parasitic body diode to eliminate any reversed current flow across the switch when it is powered off.

The UTC **US206** is applied in high-side power protection switch, USB power management, USB host and self-powered hubs, USB bus-powered hubs, hot plug-in power supplies, battery-charger circuits.
