CMOS IC

DUAL 150mW AUDIO POWER AMPLIFIER

DESCRIPTION

The UTC **PA6112** is a dual audio power amplifier with differential inputs capable of delivering typically 150mW per channel of continuous average power to an 16Ω load with less than 0.1% THD+N using a 5V power supply. The unity-gain stable UTC **PA6112** can be configured by external gain-setting resistors.

The UTC **PA6112** features an externally controlled, low-power consumption shutdown mode. The UTC **PA6112** exhibit a low quiescent current of typically 1.5mA, allowing usage in portable applications.
